

Spring into Numeracy with ECCDC's  
**NEW** math programming activities!

**eccdc**

early childhood community development centre

### Spring Tangram Activity

Invite the children to recreate the spring tangram shapes using the foam pieces to enhance their ability to sort, classify and compare two and three dimensional shapes.

### Adding and Subtracting Bee Race

Play the bee race game to allow children to investigate addition and subtraction, recognize quantities and understand counting.

### Spring Shape Sorting

Encourage the children to sort the spring shapes into the corresponding flower pots. This activity will enhance the children's understanding of numbers and develop their classifying, counting and sorting skills.

### I Spy Signs of Spring

Feel and search for the spring objects within the bag, then count the objects with the children. This group activity will enhance the children's ability to understand numbers and number relationships and count and compare quantities.

### Inch by Inch Book

Read the *Inch by Inch* book to the children and start a discussion about measurement. Use the inchworm strips to measure objects around the classroom.
